I had a direct naming conflict with the hello-world repositories on my local drive and my github server from completing task1 and task2. So I instead made a different directory by the name of hello-world-2 and completed the task as questioned, but the tutorial would not accept that as an answer because the specific name it was looking for wasn't hello-world-2.

```
[Harrisons-MacBook-Pro:hello-world harrisonmoore$ git push origin master
To https://github.com/Moorehar/hello-world.git
 ! [rejected]        master -> master (non-fast-forward)
error: failed to push some refs to 'https://github.com/Moorehar/hello-world.git'
hint: Updates were rejected because the tip of your current branch is behind
hint: its remote counterpart. Integrate the remote changes (e.g.
hint: 'git pull ...') before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
Harrisons-MacBook-Pro:hello-world harrisonmoore$
```

I tried to pull from the original, but it would not pass.

```
Harrisons-MacBook-Pro:hello-world harrisonmoore$ git pull origin master
From https://github.com/Moorehar/hello-world
 * branch           master     -> FETCH_HEAD
fatal: refusing to merge unrelated histories
Harrisons-MacBook-Pro:hello-world harrisonmoore$
```

The tasks were completed up to par as requested…

The only problem I received was slight naming conflicts which I could not figure out how to resolve. Everything passed through as requested with different names.
